bongo checkout

White Papers | Volusion

bongo INTERNATIONAL **Expand Globally, Ship Locally**

Installation

1. **Edit bongocheckout.volusion.js and on line 13 enter your PARTNER_KEY.**

2. Using the File Manager or via FTP, upload bongocheckout.volusion.js to your vspfiles folder.

3. Under Design > Site Content, locate 'ShoppingCart.asp' > 'Below_ShoppingCart' and edit this area.

4. Copy the following code into the corresponding text area.

   <form   name="BongoCheckoutForm"   action="YOUR-CHECKOUT-URL" method="post"></form>

   <script type="text/javascript" src="v/vspfiles/bongocheckout.volusion.js"></script>

5. **Replace YOUR-CHECKOUT-URL in the above code with the corresponding information available through your Bongo Partner Portal or from your Product or ImplementationSpecialist.**

Customization

There are a variety of modifications that can be made to the look and feel of the Bongo Checkout module.
Within the included JavaScript file there are various parameters that you can change:

- **partner_key -** Your Bongo Checkout partner key.

- **message_abovebutton** - The HTML displayed above the Bongo Checkout button.

- **message_abovebutton_border_color -** The border color surrounding the message that appears above the Proceed to Checkout buttons.

- **message_abovebutton_bg_color -** The background for the message that appears above the Proceed to Checkout buttons.

- **message_belowshipping -** The HTML displayed below the shipping estimate.

- **message_belowshipping_border_color -** The border color for the message that appears above the shipping estimate.

- **message_belowshipping_bg_color -** The background color for the message that appears
- above the shipping estimate.

- **button_image -** URL of the image to use for the button. Defaults to one provided by Bongo.

- **per_item_shipping -** A boolean value indicating whether to apply a flat shipping cost per item, or per order. Setting this to true will charge a shipping cost for each item, setting this to false will apply a single shipping cost to the entire order.

- **shipping_cost -** The shipping cost to be used on a per-item or per-order basis.

Understanding per_item_shipping
- When set to true, the customer will be charged shipping_cost for each item in their cart.
  ○ Example: shipping_cost = $5, Total number of items = 10
  Total shipping cost = 5 x 10 = $50

- When set to false, they will be charged a flat rate for the overall shipment.
  ○ Example: shipping_cost = $5, Total # of items = 10
  Total shipping cost = $5
