

## X-Cart Implementation Guide v2.1

### Requirements

- X-Cart v4.3 or v4.4
- Bongo Partner Key & Checkout URL
- Bongo Checkout Module for X-Cart v2.1

### Installation

1. In the Bongo\_Checkout folder edit form.tpl and enter your Partner Key and Checkout URL.
2. Upload the Bongo\_Checkout folder to:

X-Cart 4.3:

xcart / [your skin name] / modules

X-Cart 4.4:

xcart / skin / common\_files / modules

3. Upload bongo\_button.png to your root directory.
4. In your X-Cart administration area, go to Administration > Patch/Upgrade, under "Apply SQL Patch" paste the following into the field marked "SQL Query(ies)". This will activate the Bongo Checkout module. **IT IS HIGHLY RECOMMENDED YOU BACKUP YOUR DATABASE BEFORE DOING THIS.** You can backup your database from the Administration > DB backup/restore area.

```
INSERT INTO `xcart_modules` (`moduleid`, `module_name`, `module_descr`, `active`) VALUES ('1408', 'Bongo_Checkout', 'Integrated Bongo Checkout service into X-Cart.', 'Y');
```

### Setup

1. In your template, decide where you want to place the Bongo Checkout button (either the Cart or Checkout area), and insert the following code into your template:

```
{include file="modules/Bongo_Checkout/button.tpl"}
```

2. Insert the following wherever the button is used. Only insert this once per page (i.e. if you use the above to insert 3 Bongo Checkout buttons on a single page, you only need to insert this code once on that page). Make sure you insert this code AFTER the buttons.

```
{include file="modules/Bongo_Checkout/form.tpl"}
```
