White Papers | DotFeed

## Connecting DotFeed.com to Bongo

---

Open your DotFeed account at <http://manage.dotfeed.com> on one tab of your internet browser and your Partner Portal from Bongo on another tab.

Select the Payments Tab in your DotFeed Account. You must have already purchased Bongo to configure it in your account.

1. In your Bongo account, select the API button and then the API Key which is just another name for the Partner Key

The screenshot shows the Bongo International website interface. At the top left is the logo "bongo INTERNATIONAL". On the right, it says "vortex" with links for "My Account | Help | LogOut". Below the logo are three navigation icons: "Checkout" (a right arrow), "API" (a plug and gears), and "Help" (a question mark). The "API" icon is highlighted with a red dashed line that points to the "API Key" link in the left sidebar. The sidebar also includes "Reference Guide" and "WSDL". The main content area shows "Your API Key" with a yellow highlighted box containing the alphanumeric string "f8ccaa0807099bc4e9a007a5c2f5d08". A yellow callout box with a speech bubble contains the text: "Copy and paste this partner key into your DotFeed account per the instructions."

- Copy the key and paste it into your DotFeed account in the Payments tab (see below). Also, check the Enable button.

3. In your Bongo Partner Portal go to Configure > Checkout Page and copy the Checkout Page URL:

The screenshot shows the Bongo International Partner Portal interface. At the top, the Bongo International logo is on the left, and navigation links for 'My Account', 'Help', and 'LogOut' are on the right. Below the logo are icons for 'Checkout', 'API', and 'Help'. The main content area is titled 'Bongo Checkout' and contains several configuration sections: 'Checkout Page: URL', 'Checkout Page: Editable?', 'Checkout Page: Destination of "back to cart" and "edit"', and 'Checkout Page: Error Handling'. In the 'Checkout Page: URL' section, a text input field contains the URL 'https://transaction.bongous.com/pay/d4122/index.php', which is highlighted with a red box. A red arrow points to this box. Below the input field is a '[ Save / Update ]' button. The left sidebar contains a navigation menu with sections like 'Reporting', 'Implementation Guide', and 'Configure'. The 'Checkout Page' option under the 'Configure' section is highlighted with a red box.

HTTP POST Notification is a message service that notifies you of events related to Checkout transactions. You can use it to automate back-office and administrative functions, mainly in the fulfillment of orders, customers status and other information related to a transaction.

To implement HTTP POST Notification you first need to provide a callback URL (which we invoke via POST), and build the procedure for processing the call.

Callback Url:

Activate service  De-activate Service

[ Save / Update ]

What notifications will you get?

- New (N)
- Pending (P)
- Black List (B)
